- Mechanical/ electronic overheat protection.
- Set the temperature deviation notification.
- Mal-operation prevented by controller lock function.

Temperature Variation

- Superior temperature uniformity with excellent temperature control capability.

Two Series Of Models According To Heat Transfer Method

- Forced Convection**
The structure allows for the inside air to be circulated and the temperature to be controlled, producing stable temperature control and good distribution. However, the amount of moisture evaporation of the culture is relatively high.
- Natural Convection (Air-jacket)**
The air-jacket structure heats the outside air in the space where the sample is placed and transfers the heat to the inside, and the moisture evaporation amount of the culture is relatively low.

Natural Convection
(Air-jacket)
